

PROJECT: Study of Carrying Capacity, Sustainability, and Protection of the Island Identity of the Municipality of Antiparos

SCIENTIFIC DIRECTOR: Marinos Kavouras

DURATION (MONTHS): 8 months

DEPARTMENT: Department of Topography

FINANCIER: Municipality of Antiparos

DESCRIPTION: The project concerns the preparation of a study that will investigate and analyze, in a scientifically substantiated manner, the Carrying Capacity and Assessment (CCA), sustainability, and the necessity of implementing measures to protect the island identity of the Municipality of Antiparos, aiming to ensure the desired balance between natural and human-made systems. Specifically, the project will: 1. Record and utilize information and spatial data, as well as scientifically document the current situation through a longitudinal analysis and evaluation of economic, social, and environmental indicators. 2. Develop a scientifically substantiated methodological approach for CCA of the area, which will enable the rational management of natural, cultural, and tourism resources. 3. Systematically record and analyze the aforementioned indicators, with the goal of formulating a coherent proposal for the Municipality of Antiparos regarding future actions and initiatives (development scenarios), towards the formulation of policies for sustainable development.
