

PROJECT: Development of a framework for investigating & monitoring the pressures on the natural resources and infrastructure of Zakynthos due to tourist activity

SCIENTIFIC DIRECTOR: Maria Papadopoulou

DURATION (MONTHS): 15 months

DEPARTMENT: Department of Geography and Regional Planning

FINANCIER: IONIAN ISLANDS REGION

DESCRIPTION: The contracting parties will cooperate with a common goal, initially to map the pressures of tourism activity on the natural environment and the relevant infrastructure of Zakynthos, in order to be able to assess the level of response of resources to specific pressures as well as the relevant infrastructure to meet the needs of both the permanent population and visitors/tourists. By developing a combined framework of monitoring indicators, it will be possible to prioritize the actions that should be carried out by the Central Administration and the other involved bodies.
